DEGRADATION OF STEREOREGULAR POLYPROPYLENE. [1960] 5p. 3 refs.  
Order from SLA mi\$1.80. ps\$1.80 60-18426

Trans. of [Vysokomolekulyarnyye Soyedineniya] (USSR)  
1960 [v. 2] no. 1. p. 130-132.

Experiments showed that polypropylene which is quite thermo-stable in a vacuum, undergoes an intense oxidative degradation on heating in the air. In the presence of oxygen there is observed no difference in degradation of the amorphous and crystalline polypropylene. Residues of titanium oxide which can be present in commercial samples of polypropylene obtained by means of Ziegler catalysts have no effect on polymer degradation. In order to inhibit the oxidative degradation of polymers it is necessary to use antioxidants which act weakly at room temperature. Di-(4-oxyphenyl) sulfide especially strongly inhibits the oxidative degradation of polypropylene. (Author)
